

Do you have an effective way to communicate with employees, staff, students, or visitors?

Maintaining a database or requiring registration to receive messages is an old and outdated practice. Reliance on outdated landline technology means you may be investing in a system with a limited lifespan.

CAPSOL's Instant Mobile Alerting (IMA™) is the most advanced communication system allowing people to receive messages without requiring personal information such as cell phone numbers and email addresses. This patent pending feature protects your information and your privacy.

If everything is an emergency, soon nothing is an emergency.

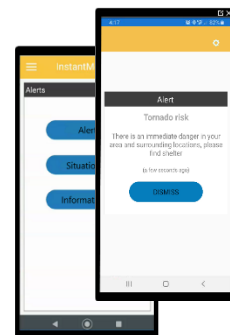

If messages are always sent with the same priority level, soon people will stop paying attention.

IMA™ allows messages to be sent with three different levels of priority, each with a specific tone –

- Alert, which is the highest level
- Situational
- Informational for generic notices

Important Features

- Messages can be sent in any language
- No user information is collected or stored
- No Privacy Issues
- No Database to enter or maintain
- Unlimited number of messages
- Messages of all types can be sent – Tens of thousands per minute

To deploy, CAPSOL does all the work.

- Your site is set up with an activation code.
- Users download IMA™ from the Apple or Google play store.
- Your specific audience activates with your code. Messaging is immediate.

Visit www.capsol.org or call for more information and let us be part of your communication solution.

WHO WE ARE:

CAPSOL's focus since 2013 has been to develop systems to identify potential threats and provide early notification. The CAPSOLSuite is designed to gather, identify, and process data as early as possible to mitigate a threat. Notifying all affected people quickly and clearly makes lives safer.
